

TPG ResourceLink 2007

Flexible Updates to the Microsoft Project Enterprise Resource Pool

TPG ResourceLink imports data from a range of sources into the Microsoft Project Server Enterprise Resource Pool. The tool enables you to not only perform the initial population of the resource pool, but also to keep it regularly updated. As a result, resources can easily be created, updated, activated, deactivated, and deleted.

The Benefits:

- Security and support for project managers, who can plan based on up-to-date resource information
- Administrators relieved of tedious and time-consuming data administration tasks

Features At-a-Glance:

- Import from multiple data sources via XML, including Microsoft Dynamics, SAP, Active Directory, SQL Server, LDAP and file systems, as well as any combination of these
- Preview function for import and detailed log report
- Import can be scheduled in advance
- Administration of several Project Servers and sites per server
- High performance
